

OLKOMPLEX DRY

Powder premix with bactericide properties

COMPOSITION :

Pure acid formulation : Formic acid E-236, Propionic acid E-280, total activity up to 75 %.

ACTION :

Short chain organic acids, and especially formic acid are effective against Salmonella bacteria.

Olkomplex Dry controls Salmonella and other Enterobacteriaceae in compound feeds, it prevents recontamination.

FEATURES :

Olkomplex Dry does not have the irritating smell normally associated with organic acids.

Although the pH of a 1 % solution is 3.5 - 4.5, the product itself is non-corrosive.

Olkomplex Dry does not contain formaldehyde, its use is therefore allowed at all levels in feed ingredients and finished compound feeds.

INSTRUCTIONS FOR USE and DOSE

The recommended dose ranges from 3 to 6 kg/mT of feed, depending on the contamination risk of the raw materials used.

For its optimal activity, Olkomplex Dry should be in the feed during minimum 3 days before consumption. During this term the organic acids are released into the feed and inhibit bacterial growth.

Doses may be raised up to 1.5 % in case of massive contamination risk.

STORAGE:

Store in a cool and dry place, protected from light.

PRESENTATION : 25 kg bags.
