

## POLIFEED OVO-SMART

Layer feed premix

Egg shell and albumen enhancer-improved storage terms.

OVOSMART is a feed premix indicated for laying hens to improve and maintain high laying yields without loss of egg quality. Maintenance of HU quality during storage. Reduces the rate of egg weight decline.

The premix formulation is based principally on all the nutritional aspects that interfere during the egg – and egg shell formation process. Improved mineral formulation, combined with aminoacids was considered to maximize mineral absorption and deposition in the egg shell reticulum.

### **Qualitative compound analysis per kg.**

Calcium metabolism factors .....	50 g
Zn + Mn Amino-acid complex .....	100 g
Avian body fluid pH regulators .....	250 g
Mineral macro and trace elements (Cu <sup>2+</sup> , Mg <sup>2+</sup> , Fe <sup>2+</sup> , Ca <sup>2+</sup> , Co <sup>2+</sup> ).....	600 g

### **INDICATIONS**

### **DOSES**

➤ At normal laying conditions, starting one month before the warm climate begins.	1 kg/mT
➤ During hot climates to prevent egg shell weakness and low albumen consistency.	2 kg /mT
➤ When broken egg shell ratio increases, during the first three weeks - then lower the dose to maintenance levels .....	3 kg/mT 1 –2 kg/mT
➤ When laying yields decrease, (moult or aged birds) first week ..... then lower the dose to maintenance levels .....	3 kg /mT 1-2 kg/mT

Blend the recommended dose homogeneously into the layer feed ration.

**PRESENTATION** : 25 kg Packs. Smaller pack - sizes on request.

**REGISTER N°** 23001-CAT
