

POLI - VITASEL SOLUCION

Liquid Premix for animal nutrition.

COMPOSITION:

Vitamin E (alpha-tocopherol acetate)	80 000	UI
Selenium (E-8) (sodium selenite)	245	mg
Carrier ad	1 000	ml

SPECIES :

POLIVITASEL is indicated for fattening ducks to improve liver formation and development.

OTHER NUTRITIONAL PROPERTIES :

In broiler pullets, it prevents encephalomalacy due to Vitamin E and Selenium shortage or impaired absorption from the feed.

In layers it is used to improve some laying yield parameters.

INSTRUCTION FOR USE:

Administer through the drinking water.

DOSAGE:

Fattening ducks : 1 ml / liter of drinking water.

Broiler pullets : prevention : 1 ml / 10 liter of drinking water.

shock dosis : 0,25 - 0,5 ml / liter of drinking water.

Layers : 1 ml / liter drinking water.

In the event of high risk of encephalomalacia, it is recommended that the fowl is administered 300 IU of vitamin E at single or repeat dose during a period of several days. It must be considered that the total quantity of vitamin E (300 IU) is the result of ingesting animal feed and drinking water

STORAGE:

Keep well sealed in a cool, dry place protected from light.

PRESENTATION: 1, and 5 l.

REGISTER No.: 20917-CAT
